

Downloading Video from a Recorded Collaborate Session

The first step when trying to access and download a recorded session is to click on **Class Collaborate** within the **Details and Actions** menu.

To the right of the title, you will see an ellipsis. Click here and proceed to the **View all recording** component of the sub-menu.

A list of available recordings will populate. Be aware that if the video recordings are from previous terms, you will need to filter for the dates of the recording. You would select **Recordings in A Range** to select the dates to search. Content is only available until the course is archived by the Blackboard administrator.

Now that the session recording has been located, you will choose the **Recording Options** at the far right. The icon is a circle with three ellipses inside.  **Click** on the icon and proceed down to **Download**.

The download will begin, and this may take a bit of time due to the length of the session recording. Once completed, you can access the file in your **Downloads** folder. Here you will be able to rename the session and transfer the file to another location or media.

Here is an example of a downloaded file from a session.
