

Setting Up Surveys with An Adaptive Release

Setting Up the Survey

When it comes to collecting course data from students, it sometimes becomes necessary to lock out content until a survey/assignment has been completed by the student. In the **Course Survey** example, it is built like a test but is not usually added to the grade book as a graded assignment. Some instructors add an overall point value to entice the student to take a survey when data collection is necessary. In this case, the survey is scored as a 100-point assessment but is not calculated in the GPA. Both surveys, assignments, and assessment components work the same way when setting up **Adaptive Release** to restrict access.

Question 1
100 points

Your feedback about your experiences taking this course is critical to Jacksonville University. We take your comments seriously, please take this short survey before continuing to your Exit Exam.

[Complete the Jacksonville University Course Survey](#)

Use your JU username and password to log in.

Note: not the full JU email, only your username

After taking the course survey, select YES/NO from the choices below to complete the attestation agreement in order to proceed to the Exit Exam of the course. By choosing Yes you acknowledge that you have completed the Jacksonville University Course Survey.

Warning! Not submitting an attestation agreement will lock you out of the Exit Exam. If this happens please contact your instructor to regain access.

Thank you!

A Yes
B No

The survey should be built with a **Yes/No** or **True/False** attestation to allow for immediate grading once the survey is complete. As mentioned before, the grading is not included in the **Total Points Column** in the grade book unless the instructor wants to include the points for participation.

Grading

Maximum points 100 points

The **Course Survey** is set up just like an assessment and requires input from the student when completed before the assignment/exam that is being restricted will open. In the example above, the survey has been created with the link in blue. The link is active, and once complete, it will require the student to select **Yes** or **No** and submit. The grading will be automatic to release the **Exit Exam** example.

Since the original **Course Survey** was worth 100 points and the submission was complete, the **Exit Exam** example link will now open, allowing the student to take the exam. Details on creating a release condition are found below. The release condition should be applied once the survey is built, and the assessment or assignment has been added to the Blackboard class.

Adaptive Release

Always remember that the **Release Conditions** are the same as the adaptive release found in Blackboard Learn. The naming conventions are a bit different. On the assessment or assignment being released, you will select the down arrow under the title to access the menu and proceed to **Release Conditions**. A right-side menu will appear, and you will keep **All Members** selected unless you are releasing to select a group of students. Then you will have 2 options. **Date/Time** for a generic show/hide option or **Performance**. The **Performance** options allow you to stipulate the completion of an assessment/assignment.
